PROFESSIONAL SERVICES

AUTOMATED TESTING WITH THE MTS PORTAL SERVICE

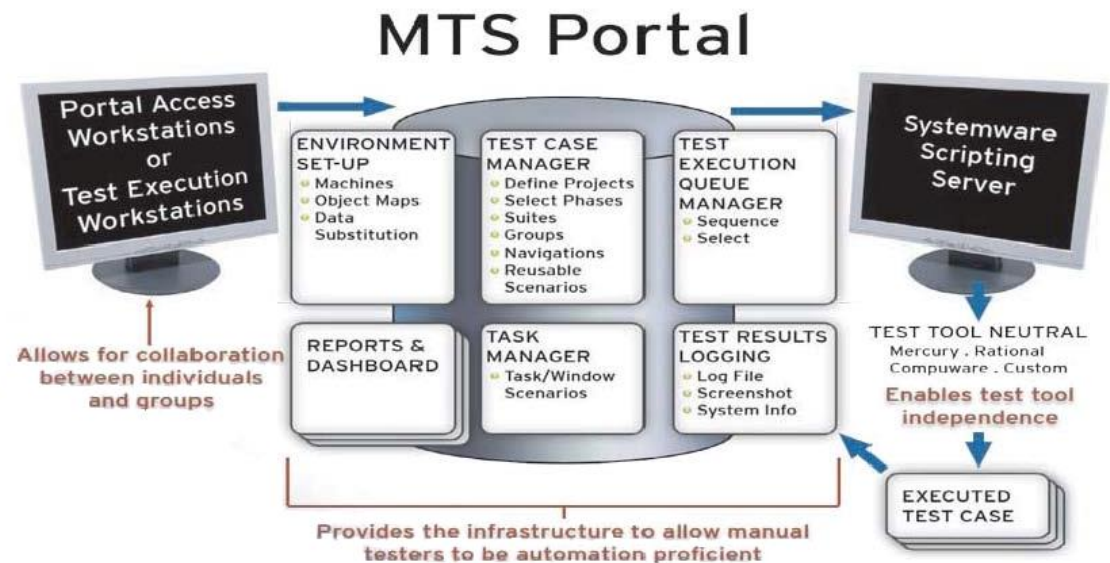

SystemwarePS' Test Execution Services provides comprehensive testing services available in multiple configurations:

- On-Site – Test execution team assembled at client site.
- Off-Site – Execution team assembled at SystemwarePS facilities.

The approach to enabling any type of test execution includes the implementation of a standard testing process. Key to this process is the establishment of detail-oriented test scripts during test design that allow for script-based test execution.

MANUAL TESTERS UTILIZE MTS PORTAL FOR TEST AUTOMATION

This service offering utilizes the highly innovative but yet proven approach to test automation via the MTS Portal. The infrastructure within the MTS Portal allows manual testers to be automation proficient thus reducing the overall cost of resources with the savings then passed on to the client. The Systemware Scripting Server allows for total test tool independence as it functions with all commercially available test tools and can adapt to custom-built test tools as well.

APPLICATIONS ON ANY PLATFORM
.NET, Java, Mainframe, Client/Server, Web

ADVANTAGES TO THE SYSTEMWARE PS APPROACH

- Executes test cases up to 18 times faster than manual testing
- Allows for the development of effective regression test beds
- Minimizes the costs of maintaining the test scripts
- Increases test coverage tremendously while reducing costs
- Improves overall product quality and increases speed to market
